András Bonifác Kónya

(Student ID: 01502933)

Story

London police chiefs, to **discover trends** regarding the stop and search operation (the operation) in the dataset. The goal of the user is to find a way to **improve the operation in London** by looking for **increasing or decreasing trends** in the data and what could be the **factors that cause the trends**.

After that, the chief might be able to **come up with some hypothesis for further inquiry** via subordinated police branches in each borough. Finally, the chief could make better decisions on how to distribute the police force for the operation and to which area.

Implementation

- Python based tools
 - Flask Web Framework as a backend
 - Pandas and Numpy for data processing and filtering in the backend.
- Javascript based tools
 - JQuery for web interactivity
 - D3.js for creating the visualisation and some interactivity in the plots.
- Other tools
 - Bootstrap for layouting the visualisation
 - Heroku for web hosting.
